Richard | Parking

Richard | Parking

The Richard line from Veko guarantees years of trouble-free lighting for your carpark facilities. Dust and moisture cannot get a grip on the robust luminaire. The energy efficiency of the system is exceptional. The Richard, with its wide beam lamps, delivers excellent uniform lighting at floor level. The luminaire can even be installed in the centre of the vehicle lane. The Richard can also be equipped with a Parking Guidance System. The luminaire can only be removed using power tools, making it vandal-resistant.

Veko has an eye for the future

If you wish to replace your existing lighting with energy-efficient LED lighting, then opting for Veko luminaires is the right choice. With Veko you are investing in a futureproof product. You can leave the profile in place and replace and/or add luminaires at any time without needing to adapt the system. And an additional positive point in terms of sustainability is that our lighting is supplied almost without packaging, and is 100% recyclable.

Total Cost of Ownership

Based on Total Cost of Ownership (TCO), you have a clear overview of both the initial investment and the energy costs for the future. TCO helps you identify the ideal types of luminaires, sensors and/or the light management system.

Good lighting is the starting point

In an indoor/underground carpark, lighting not only ensures visibility but also a sense of safety. This starts with sufficient lighting levels and minimum shadow effect. The lenses and profiles are vandal-proof and are suitable for installation at low heights.

Diffuse

The Diffuse lens delivers an attractive, even beam, reducing the blinding effect to a minimum. The lens is also ideal for public areas and pedestrian zones.

Wide

The Wide lens delivers a beam of approx. 25 degrees, making it ideal for generating a uniform lighting level when linear lighting is used on both sides of the vehicle lane.

X-Wide

The X-Wide lens has been specially developed for parking applications. The extra-wide beam guarantees unique uniformity when linear lighting is fitted in the middle of the vehicle lane. The result is an optimum light volume with the fewest possible light lines.

The light line in detail

We configure our light lines for every project. The light lines are designed stepwise, depending on the conditions required. In this way, we create a unique product, adapted to your project. This effect can be achieved with new light lines or by renovating existing Veko light lines.

A smart system

Richard linear lighting is a profile system designed individually for each project. This allows you to create an ideal combination of continuous light lines combined with presence detection and emergency lighting. If you opt for a profile with cable duct, other cables can easily be integrated.

Parking Guidance System

In collaboration with various partners, Veko offers the option of an integrated parking guidance system. By means of sonar registration and camera recognition, you can display how many parking spaces are available for your visitors.

From design to maintenance

Veko are specialists in linear lighting. The company develops and manufactures LED lighting in-house. As far as possible, we remove all our customers' cares and deliver turn-key projects. From application to maintenance, you can rely on the specialists at Veko.

Development

Every day, a team of designers and product engineers at Veko is working very hard developing, testing and producing the latest industrial lighting products. Veko aims to deliver the ideal lighting solution for every factory hall, sports hall, carpark, refrigerated and frozen storage location and retail environment. Through the use of separate lenses, Veko identifies the ideal optical solution. One special feature is that whereas Veko used to purchase all components, the company now manufactures the light sources itself, in combination with smart switching systems. Thanks to Veko Tune, luminaires are adapted precisely to your specific wishes.

Production

Veko operates a modern factory and also manufactures its own LED strips. Veko even produces 1.5 metre-long LED boards eradicating annoying interruptions in the lighting pattern. In the factory in Schagen, luminaires are produced on a project basis and delivered fully prefabricated.

Installation

Engineers at Veko work in fixed teams and take up the challenge to install your lighting as efficiently as possible. Because they handle linear lights on a daily basis, and the systems are delivered plug and play, you experience minimal nuisance on the shop floor and save up to 50% on installation times.

The Veko team will also be happy to remove your existing lighting. This fact, combined with the minimal use of packaging material guarantees that your location can be put back into action quickly and cleanly.

Service and maintenance

If something does go wrong with your system, the service staff are permanently on call. Veko handles all light disruptions from a central location, guaranteeing rapid, adequate assistance.

Reference projects

Over the past few years, Veko has completed numerous eye-catching projects based on our innovative luminaires, backed up by the latest technology. We are proud to share the results and findings of our customers.

Amsterdam RAI carpark

In the ultramodern P4 high-rise carpark at the RAI exhibition centre in Amsterdam, in collaboration with Bosman Installatietechnik, Veko delivered the dynamic LED lighting on all seven floors.

Apcoa carpark

On behalf of Apcoa, Veko designed and installed an original carpark lighting system that complies with the legal requirements while delivering an attractive, clean aesthetic look.

Dok Noord carpark

For the lighting at the Dok Noord carpark in Ghent in Belgium, the close collaboration between Veko and the Carpark operator resulted in an intelligent total package to be proud of.

“The lighting in P4 is nice: it's bright, beautiful white and lightens the garage well. Both during daytime, together with daylight, and at night. I consider a welcome and safe feeling in a parking garage very important, and Veko's lighting contributes to this.”

Mariska Dreschler, Group Director
Horticulture - GreenTech, RAI Amsterdam
